

Each week we produce a chart book of the S&P 500 sectors to review where money is flowing within the market as whole. This helps refine not only decision making about what to own and when, but what sectors to overweight or underweight to achieve better performance.

HOW TO READ THE CHARTS

There are three primary components to each chart:

- The price chart is in orange
- The Over Bought/Over Sold indicator is in gray
- The Buy / Sell indicator is in blue.

When the gray indicator is at the TOP of the chart, there is typically more risk and less reward available at the current time. In other words, the best time to BUY is when the short-term condition is over-sold. Likewise when the buy/sell indicator is above the ZERO line investments have a tendency of working better than when below the zero line.

With this basic tutorial let's get to the sector analysis.

Basic•Materials

- Long-term trend line is currently broken
- Previous support from February lows has been broken and is now resistance.
- Currently on very deep sell-signal (bottom panel)
- Oversold condition is being reduced. (top panel)
