

Each week we produce a chart book of 10 of the current positions we have in our equity portfolio. Specifically, we are looking at the positions which warrant attention, or are providing an opportunity, or need to be sold.

While the portfolios are designed to have longer-term holding periods, we understand that things do not always go the way we plan. This monitoring process keeps us focused on capital preservation and long-term returns.

HOW TO READ THE CHARTS

There are four primary components to each chart:

- *The price chart is contained within the shaded area which represents 2-standard deviations above and below the short-term moving average.*
- *The Over Bought/Over Sold indicator is in orange at the top.*
- *The Support/Resistance line (green) is the longer-term moving average which also acts as a trailing stop in many cases.*
- *The Buy / Sell is triggered when the green line is above the red line (Buy) or vice-versa (Sell).*

When the price of a position is at the top of the deviation range, overbought and on a buy signal it is generally a good time to take profits. When that positioning is reversed it is often a good time to look to add to a winning position or looking for an opportunity to exit a losing position.

With this basic tutorial let's get to the sector analysis.
