

## HOW TO READ THE CHARTS

There are four primary components to each chart:

- The price chart is contained within the shaded area which represents 2-standard deviations above and below the short-term moving average.
- The Over Bought/Over Sold indicator is in orange at the top.
- The Support/Resistance line (green) is the longer-term moving average which also acts as a trailing stop in many cases.
- The Buy / Sell is triggered when the green line is above the red line (Buy) or vice-versa (Sell).

AMT (Weekly) 212.39

- Our first long-recommendation for AMT was in January of this year. Since then, the stock has gone parabolic as the "yield chase" has ensued.
- Take profits for now.
- With the buy signal **EXTREMELY** extended, lower panel, a correction is going to occur at some point or at least a length consolidation as seen in 2017-2018.
- Move stops on all positions to \$190

- We previously recommended a long-position in APD back in January.
- The trade has gotten crazy overbought as APD has gone parabolic.
- Take profits and reduce overall weight to 1/2 position and wait for a correction to add back into it.
- Stop-loss is \$200

**CVS - CVS Healthcare**

- We previously took on a position in CVS but were ultimately stopped out. We like the business model and the fundamental backdrop of the company.
- The trade setup is not yet ideal but the basing process has allowed CVS to get deeply oversold. This provides a reasonable risk/reward point to start accumulating a position.
- Buy 1/2 position at current levels with a very tight stop at \$52
- Add second 1/2 on move about \$58 that remains for more than a week.
- Stop Loss is set tight at \$52

## WMT - Walmart

- Last week we discussed adding a position in WMT on a breakout above resistance.
- WMT has continued to push that resistance and looks to be working a breakout at recommended levels.
- Buy above \$103.50
- Stop loss is set at \$100

- Last week, we recommended taking on a short-position in GOOG.
- The initial target was \$1000 but GOOG got in the neighborhood at \$1025.
- Close out the position and look for a re-entry on a failed attempt to get above \$1100

- In May we recommended a short position in AMC.
- Initial targets have been reached and while AMC is oversold, it has just registered an important sell signal.
- Close out the short position for now.
- Look to re-enter the position on a failed rally to \$14.
- Look for a break below \$50 to establish the short position.
