

IMPORTANT NOTE: Each week we produce a chart book of 10 stocks which have hit our watch list for potential additions to our long-short equity trading portfolio. With the recent sharp advance in the market, we it has become a difficult task to find potential candidates this week. **This is indicative of an overextended bull run that is due for a correction.**

As noted last week, the new [SCAN TOOL](#) also has several new screening parameters to include both fundamental factors (*Piotroski Score*) and momentum factors (*Mohanram Score*) along with Zack's rankings.

HOW TO READ THE CHARTS

There are four primary components to each chart:

- The price chart is contained within the shaded area which represents 2-standard deviations above and below the short-term moving average.
- The Over Bought/Over Sold indicator is in orange at the top.
- The Support/Resistance line (green) is the longer-term moving average which also acts as a trailing stop in many cases.
- The Buy / Sell is triggered when the green line is above the red line (Buy) or vice-versa (Sell).
